

For Continuing Care Facilities

Overview

NetRecipe®, a component of the Foodservice Suite® from CBORD®, is an Internet-based recipe scaling tool for multi-unit continuing care foodservice operations. It provides the management tools you need to support your branded concepts, large cafeterias, coffee shops, and dining halls, all with one integrated solution.

How does it work?

Your recipe database is made available using a secure website so that units can access the site, build menus, and scale recipes—all online. With NetRecipe, creating clear, easy-to-follow, scaled recipes is simple!

A pie chart makes calorie information readily available to those who want to know percentages of calories from protein, carbohydrates, and fat. The list of ingredients also adds value, especially for people with allergies or other food restrictions. Finally, the nutrition label is in familiar USDA format. Display the printed labels in dining areas as an added service to your customers!

NetRecipe makes the whole process easy. Copy and edit national menu templates, create and save menu templates for individual units, print nutrition labels and recipes quickly and easily . . . all from the convenience of your computer!

About Foodservice Suite

Foodservice Suite provides the management tools needed to improve margins, re-energize service, and increase customer satisfaction. All modules of FSS work together seamlessly to automate your operations. The system is scalable—choose just the features that meet your needs, build from this core solution, and add additional capabilities later. Modules include: Menu Management System®, Inventory Management System, Handheld Inventory, Nutritional Accounting System, EventMaster® PLUS!, NetCatering®, NetRecipe®, NetNutrition®, and NetMenu®.
